

ATA's Walsh Generation and Distribution
(total of 8 walsh patterns in whole system)

Possible 32 pattern upgrade to ATA's Walsh Generation and Distribution
iBob gateway upgrade of some sort required!

Note: new versions of the 1033A, 1040 and 1032 boards are required. These are all pretty simple low speed digital circuit boards. Bigger issue is the need to upgrade the iBob de-walsh circuitry! Making new RFCB backplanes to be other than 3 sets of 8 patterns Is doable but is a much more disruptive upgrade
