Dear Mr. Mejia and Mr. DeBoer:

WRMS Engineering is pleased to present the enclosed revised proposal to the University of California and the SETI Institute to provide detailed engineering services for the Allen Telescope Array (ATA) Project. As agreed, the project is now divided into four phases. Phase I covers the design and installation of the first seven antennas. Phase II covers the detailed design for the remaining antennas and processor building shell. Phase III will cover the construction for the Phase II design. Phase IV will cover the design and construction of the processor building interior and cooling system. This proposal covers Phase II of the project.

Sections 1, 2 and 4 of the proposal represent our understanding of the project, scope of work, deliverables and schedule. Please review this proposal in detail and contact us immediately if there is any information that is inconsistent with your requirements, or if you have any questions.

We sincerely appreciate the opportunity to submit this proposal and look forward to working with you on the project.

Sincerely,

Richard Christo
Project Manager
